BACKGROUND INFORMATION

This Statistical Annex to the 2019 Alert Mechanism Report (AMR 2019) presents the Macroeconomic Imbalance Procedure (MIP) scoreboard and auxiliary indicators used in the economic reading of the MIP scoreboard. These indicators are mainly compiled by Eurostat from the data transmitted by Member States, following European legislation. The MIP scoreboard indicators are presented with their indicative thresholds (used in the AMR) while no threshold is applied to the auxiliary indicators.

The policy framework of the MIP relies on timely and high quality socio-economic and financial statistics. Since the publication of the first Statistical Annex in 2012, significant progress has been achieved towards enhancing the standards and methods used for the compilation of underlying data as well as strengthening the statistical quality assurance framework.

The MIP Scoreboard consists of fourteen scoreboard indicators measuring internal and external imbalances as well as social and labour market developments. The MIP scoreboard indicators for the last ten years are displayed in this statistical annex by year in chapter 1, and by country in chapter 4. Table 1 lists the MIP scoreboard indicators together with detailed information on their data sources.

The cut-off date for the data, that is the date on which the data were extracted from the Eurostat database for the preparation of this document, was the **24th October 2018**. For additional information about the data, please contact ESTAT-MIP@ec.europa.eu.

Table 1. MIP scoreboard indicators (AMR 2018)

Indicator	Unit	Data source	Statistical domain
Current account balance (% of GDP)	3 year average	Eurostat	BoP/NA
Net international investment position	% of GDP	Eurostat	BoP/NA
Real effective exchange rate (42 trading partners, HICP deflator)	3 year % change	DG ECFIN	
Export market share (% of world exports)	5 year % change	Eurostat, IMF	BoP
Nominal unit labour cost index (2010=100)	3 year % change	Eurostat	NA
House price index (2015=100), deflated	1 year % change	Eurostat	Price statistics/NA
Private sector credit flow, consolidated	% of GDP	Eurostat	NA (FA)
Private sector debt, consolidated	% of GDP	Eurostat	NA (FA)
General government gross debt	% of GDP	Eurostat	EDP/GFS
Unemployment rate	3 year average	Eurostat	EU-LFS
Total financial sector liabilities, non-consolidated	1 year % change	Eurostat	NA (FA)
Activity rate (% of total population aged 15-64)	3 year change in pp	Eurostat	EU-LFS
Long-term unemployment rate (% of active population aged 15-74)	3 year change in pp	Eurostat	EU-LFS
Youth unemployment rate (% of active population aged 15-24)	3 year change in pp	Eurostat	EU-LFS

Note: NA – National Accounts; BoP – Balance of Payments; FA – Financial Accounts; EDP – Excessive Deficit Procedure Statistics / GFS – Government Finance Statistics; and LFS – Labour Force Survey/Labour Market Statistics; pp – percentage points

Supplementing the MIP scoreboard indicators, a list of 28 auxiliary indicators (see Table 2) provides additional information on aspects linked to the general macroeconomic situation, nominal and real convergence inside and outside the European Union and the euro area, detailed data on external liabilities, including foreign direct investment and net external debt, and social statistics. The auxiliary indicators enhance the information base for understanding potential imbalances, as well as the adjustment capacity of the economy. The auxiliary indicators are also presented in this Statistical Annex by year (in Chapter 2) and by country (in Chapter 5).

Compared to the AMR 2018 the composition of the set of auxiliary indicators has changed, mainly to benefit from improved statistics becoming available and to incorporate into the set of the auxiliary indicators variables that provide finer breakdowns and/or complementary information to the Scoreboard indicators.

Net international investment position excluding non-defaultable instruments measured as a percentage of GDP (NENDI) replaced the Net External debt (NED), as this indicator focuses on the NIIP components that may be subject to default or partly be used as collateral. This change has become possible after the adoption of the 6th version of the Balance of Payment and International Investment Position Manual (BPM6) that permits a finer breakdown of net foreign assets and liabilities.

Consolidated banking leverage (CBL), domestic and foreign entities (asset-to-equity multiple) from the Consolidated banking data (CBD) produced by the European Central Bank (ECB), replaced the previous non-consolidated financial sector leverage (FSL) indicator. The leverage indicator based on ECB data has a clearer economic interpretation since it is consistently based on book values, whereas the previous indicator provided the ratio of debt over equity, based on the overall financial sector (including banks, insurers, pension funds, mutual funds, and other financial institutions) on a non-consolidated basis.

Household debt, consolidated (including non-profit institutions serving households (NPISH)) as a percentage of GDP was added; this variable helps to distinguish between the debt of households and that of non-financial corporations (which would correspond to the difference between total private debt, already included among the indicators of the MIP scoreboard, and household debt), and contributes to interpreting and assessing private debt developments.

Finally, following the availability of cross-country-comparable data in the ECB's consolidated banking statistics, the addition of **Gross non-performing loans of domestic and foreign entities** (in percentage of gross loans, GNPL) has become possible. The indicator is consistent with the macro-financial focus of MIP surveillance and provides complementary information to assess private debt developments.

In order to keep the total number of indicators stable, two auxiliary indicators were removed: **ten-year change of Nominal unit labour cost** (NULC), as it overlaps with data on ULC and on ULC relative to euro area already in the scoreboard, and **non-consolidated Private sector debt**, which has been superseded by the consolidated headline indicator.

Table 2. MIP auxiliary indicators (AMR 2019)

Indicator	Unit	Data source	Statistical domain
Real GDP	1 year % change	Eurostat	NA
Gross fixed capital formation	% of GDP	Eurostat	NA
Gross domestic expenditure on R&D	% of GDP	Eurostat	Business Statistics/NA
Current plus capital account (Net lending-borrowing)	% of GDP	Eurostat	BoP/NA
Net international investment position excluding non-defaultable instruments	% of GDP	Eurostat	BoP/ NA
Foreign direct investment in the reporting economy – net inward flows	% of GDP	Eurostat	BoP/NA
Foreign direct investment in the reporting economy - stocks	% of GDP	Eurostat	BoP/NA
Net trade balance of energy products	% of GDP	Eurostat	International Trade/NA
Real effective exchange rates – euro area trading partners	3 year % change	DG ECFIN	

Export performance against advanced economies	5 year % change	Eurostat/OECD	BoP
Terms of trade	5 year % change	Eurostat	NA
Export market share - in volume	1 year % change	Eurostat /IMF	
Labour productivity	1 year % change	Eurostat	NA
Gross non-performing loans, domestic and foreign entities	% of gross loans	ECB	CBD
Unit labour cost performance relative to euro area	10 year % change	DG ECFIN	
House price index (2015=100) - nominal	3 year % change	Eurostat	Price statistics
Residential construction	% of GDP	Eurostat	NA
Household debt, consolidated (incl. NPISH)	% of GDP	Eurostat	NA (FA)
Consolidated banking leverage	Total asset/ total equity	ECB	CBD
Employment rate	1 year % change	Eurostat	NA
Activity rate	% of total population aged 15-64	Eurostat	EU-LFS
Long term unemployment rate	% of active population aged 15-74	Eurostat	EU-LFS
Youth unemployment rate	% of active population aged 15-24	Eurostat	EU-LFS
Young people neither in employment nor in education and training	% of total population aged 15-24	Eurostat	EU-LFS
People at risk of poverty or social exclusion	% of total population	Eurostat	EU-SILC
People at risk of poverty after social transfers	% of total population	Eurostat	EU-SILC
Severely materially deprived people	% of total population	Eurostat	EU-SILC
People living in households with very low work intensity	% of total population aged 0-59	Eurostat	EU-SILC

Note: NA – National Accounts; BoP – Balance of Payments; CBD – Consolidated banking data; FA – Financial Accounts; LFS – Labour Force Survey/Labour Market Statistics; SILC – Statistics on Income and Living Condition

In Chapter 3, the data are presented by indicator to allow easy comparison of Member States for the 10-year time series. In addition, short descriptions of the indicators and detailed information on sources and methods employed for their compilation are provided.

STATISTICAL METHODOLOGY IMPROVEMENTS

Since 2014, MIP indicators stemming from the National Accounts (NA) and Balance of Payments (BoP) and International Investment Position (IIP) domains have been computed following the ESA 2010 and BPM6 statistical standards (the European System of Accounts 2010 and the Balance of Payments and International Investment Position Manual, sixth edition) that guarantee a high level of comparability across European Union Member States. The successful implementation of these standards improved the quality of the MIP underlying data.

In particular, concerning indicators from the Balance of Payments and International Investment Position, the revision of international standards and changeover to BPM6 was translated into new data requirements via the adoption of [Commission Regulation \(EU\) No 555/2012](#) and ECB Guideline (ECB/2011/23). According to the legislation, Member States shall submit to the Commission (Eurostat) data following the BPM6 requirements from 2014 onwards only. In order to maintain comparability over time, either countries themselves or Eurostat in cooperation with them, have back-calculated the main BoP time series according to the new standards. As a result, data coverage for the ten years timespan needed for this year's Statistical Annex (2008-2017) is complete.

The implementation of the standards ensures conceptual consistency between National Accounts and Balance of Payments/ International Investment Position. However, in practice, differences in the different components of the accounts (the BoP/IIP and NA Rest of the world data) still persist.

Eurostat has further elaborated on the reconciliation of the Balance of Payments and the Rest of the World (RoW) account at national level. After the implementation of the BPM6 methodology in

2014, Eurostat has regularly assessed the state of consistency between Balance of Payments and National Accounts statistics, with a focus on the non-financial accounts. In order to maximize efforts at European level, Eurostat contributes to a Task Force on the Consistency between NA and BoP, established by the Committee for Monetary, Financial and Balance of Payments statistics (CMFB), with the purpose of identifying the reasons behind methodological differences in compiling the two data sets and making recommendations for addressing them.

Additional changes in 2018

A common harmonised European revision policy for National Accounts and balance of payments statistics covering benchmark and routine revisions has been recently agreed and its implementation has started on a voluntary basis. The policy includes differentiated guidelines regarding the timing and depth of routine and benchmarking revisions to quarterly and annual data. It aims at improving adherence to the twofold principle of alignment at national level between statistical domains and coordinated alignment at European Union level across the countries. While most countries plan to introduce benchmark revisions in national accounts in 2019, it is worth noting that France and the Netherlands already implemented their benchmark revisions in 2018.

In the **Balance of Payments** domain, progress has been registered concerning the asymmetries in trade in goods and services. To address the problem of asymmetries in mirror trade data, Eurostat organized several workshops in the course of 2016 and 2017 with Member States. During these workshops, experts from Member States had the opportunity to exchange experiences, discuss bilaterally and decide on specific actions to resolve their corresponding trade asymmetries. Due to the full alignment with integrated levels in national accounts, the current account and IIP of the Netherlands has been revised backwards. Ireland improved the consistency of treatment of research and development in its National Accounts and Balance of Payments Statistics. Further, estimates of trade in financial services were improved, and the involvement of Multinational enterprises in cross-border transactions related to intellectual property and royalties/licenses were accounted for.

In the domain of **Financial Accounts**, regarding Total Financial Sector Liabilities, work is ongoing to ensure a comprehensive and timely coverage of 'Other financial institutions' (OFIs). Other areas of ongoing or planned statistical work which are important for the quality of MIP indicators concern the recording of other equity, of loans between non-financial corporations, and of derivatives. For Luxembourg there have been further improvements in sources and methods in financial accounts, leading to significant revisions particularly for 2014-2015 in the indicators on Total Financial Sector Liabilities, Private Sector Debt, and Private Sector Credit Flow. For the Netherlands there were significant revisions in these three MIP indicators due to the 2018 national accounts benchmark revision.

Concerning the **Labour Force Survey**, from the third quarter of 2017 Ireland substituted the Quarterly National Household Survey (QNHS) by the new Labour Force Survey (LFS) as the official source of estimates of employment and unemployment. The new survey introduced several methodological changes, in particular the introduction of mixed collection modes, a new sample allocation guarantying equal distribution of the sample over all the weeks of the quarter, the introduction of a non-response adjustment in order to reduce the possible bias of estimates, and the implementation, in the weighting procedure, of the results of the 2016 Census of Population. The latter change had the largest revision impact. To minimise breaks in series, the Irish Central Statistics Office has created a back-casted LFS series from Q1 1998 to Q2 2017 using scaling factors calibrated on the base of a parallel run of the QNHS and LFS at the beginning of 2017. As a consequence, MIP indicators series have been revised as well.

Further methodological improvements have been introduced in the following countries: Malta implemented a back data extensions of its new weighting scheme using population estimates, amongst other sources, starting from the first quarter of 2010 onwards; Belgium revised its survey methodology, in particular for the sampling design, rotational scheme of the survey units and weighting procedure; Denmark improved data collection and introduced the Computer-assisted web interviewing (CAWI) technique also in the core survey.

General Government Gross Debt data notified for the years 2014 to 2017 have been released on 22nd October 2018 within the EDP notification. For more information on main revisions between the April 2018 and the October 2018 notifications please see the latest [EDP news release](#)¹.

THE MIP QUALITY FRAMEWORK

The credibility of the MIP and its smooth implementation depends critically on the availability and quality of the MIP underlying statistics. The statistics used in the procedure have to be fit for the purpose, reliable and comparable among Member States and in time. For that reason, the scoreboard indicators are regularly reviewed; the underlying statistical methodology and the statistical production processes are constantly improved. Statistics underlying the MIP indicators are based on European Union legislation and compiled by the European Statistical System (ESS) and in part by the European System of Central Banks (ESCB).

In 2016, the Economic and Financial Affairs Council (ECOFIN)² recalled that the MIP must rely upon sound and harmonised official statistics and since 2011 it had emphasised the importance of close cooperation between the ESS and the ESCB in assessing the reliability of the statistics underlying the MIP and improving their quality. Following the invitation of the Council to take all necessary initiatives to assure a reliable procedure for the compilation of MIP indicators as well as a continuous improvement of the underlying statistical information, a Memorandum of Understanding (MoU) was signed between Eurostat and the Directorate General Statistics of the European Central Bank in November 2016, which mutually recognises both quality assurance frameworks and enables an even closer cooperation on the respective quality reports in the field of BoP/IIP and Financial Accounts.

The MIP quality assurance framework, developed jointly by Eurostat and the Directorate General Statistics of the European Central Bank, follows a three-level structure. A [comprehensive webpage](#)³ with information and links to all relevant quality documents is available on the MIP dedicated section of Eurostat website. In this framework, the work performed in 2018 consisted of the following actions:

- Level 1: preparation of an annual ESS-ESCB quality assessment report on MIP statistics by Eurostat and the ECB towards the European Parliament and Council, policy makers and the public at large, to assess the reliability and comparability of MIP underlying statistics and address the most relevant quality issues; the fourth report has been prepared in 2018 and has been published on the websites of Eurostat, the ECB, and of the CMFB.

² Council conclusions of ECOFIN Council meeting on 8 November 2016
(<http://data.consilium.europa.eu/doc/document/ST-14164-2016-INIT/en/pdf>)

³ <https://ec.europa.eu/eurostat/web/macroeconomic-imbalances-procedure/quality>

- Level 2: domain-specific quality reports produced by Eurostat and the ECB summarising the main findings for the euro area or the European Union Member States. These reports assess the underlying compilation process and its robustness, describe its legal basis and evaluate whether the statistics are in line with international statistical standards. The following level 2 reports are currently available:
 - National Accounts (including Financial Accounts) ([Eurostat](#)⁴) and Financial Accounts ([ECB](#)⁵)
 - Balance of Payments and International Investment Position statistics ([Eurostat](#)⁶, [ECB](#)⁷)
 - House Price Statistics ([Eurostat](#)⁸)
 - Labour Force Survey ([Eurostat](#)⁹)

In the area of National Accounts, following the adoption of an implementing act¹⁰, an annual reporting on the quality of national and regional accounts data by Member States started in 2017. The first annual Eurostat quality report was published on 17 May 2018¹¹, based on data transmissions in 2016 covered by the ESA 2010 transmission programme. The Eurostat quality report also explicitly covers data underlying the MIP indicators. The set of quality indicators covered will be progressively extended by 2021. An overview on ESA 2010 implementation and quality was added to the Eurostat website¹².

The full implementation of the alignment of the existing Quality Reports on Balance of Payments/International Investment Position produced by the ESS and the ESCB was achieved in the course of 2018 (on reference data for 2017). While due to the different data coverage and legislation it is currently not possible to have one common report, its structure, the indicators and the findings included in the Eurostat and the ECB reports are to great extent harmonized.

In addition, the Commission (DG ECFIN), in its capacity as compiler of the Real Effective Exchange Rate (REER) indicator, publishes quality information on real effective exchange rate indicators on its website¹³.

- Level 3: development of condensed country specific self-assessment reports on the quality and statistical processes for statistics underlying the MIP indicators which are easily understandable by users. They should provide the basis for assuring the quality of the statistics and their comparability across countries. Member States are encouraged to publish such reports. In 2017

¹³ https://ec.europa.eu/info/files/report-quality-sources-and-methods_en

information for the statistical domains Balance of Payments and International Investment Position, Financial Accounts, House Price Statistics and the Labour Force Survey were prepared for almost all countries. Updated versions of these national reports are being drafted and they will be published on the CMFB website¹⁴ when available.

Moreover, in the context of the MoU, joint ECB-Eurostat visits to the Member States have taken place, focussing on BoP and Financial Accounts. The first two pilot joint visits took place in 2017 in Belgium and Greece. In 2018 Eurostat and the ECB have visited Luxembourg and Poland.

The rest of this document presents MIP scoreboard and auxiliary indicators by different perspectives: [Chapter 1](#) and [Chapter 2](#) illustrate the headline and auxiliary indicators by year respectively, [Chapter 3](#) focuses on the evolution of indicators in time, while [Chapter 4](#) and [Chapter 5](#) present the scoreboard and auxiliary indicators by Member State respectively, finally [Chapter 6](#) illustrates untransformed scoreboard indicators by year.

Chapter 3: Tables by indicator

Table 3.1: Current account balance, % of GDP (3 year average)

The Current account provides information about the transactions of a country with the rest of the world. It covers all transactions (other than those in financial items) in goods, services, primary income and secondary income, which occur between resident and non-resident units. The MIP scoreboard indicator is the three-year backward moving average of the current account balance expressed in percent of GDP. The indicator is based on Balance of Payments (BoP) data. Starting from October 2014 definitions are based on the Sixth Edition of the IMF's Balance of Payments and International Investment Position Manual (BPM6).

Table 3.2: Current account balance (% of GDP)

The Current account provides information about the transactions of a country with the rest of the world. It covers all transactions (other than those in financial items) in goods, services, primary income and secondary income, which occur between resident and non-resident units. The indicator is expressed in percent of GDP and based on Balance of Payments (BoP) data. Starting from October 2014 definitions are based on the Sixth Edition of the IMF's Balance of Payments and International Investment Position Manual (BPM6).

Table 3.3: Net International Investment Position (% of GDP)

The international investment position (IIP) is a statistical statement that shows at a point in time the value and composition of financial assets of residents of an economy that are claims on non-residents and gold bullion held as reserve assets, and liabilities of residents of an economy to non-residents. The difference between an economy's external financial assets and liabilities is the economy's net IIP (NIIP), which may be positive or negative. The NIIP provides an aggregate view of the net financial position (assets minus liabilities) of a country vis-à-vis the rest of the world. The MIP scoreboard indicator is expressed in percent of GDP and based on Balance of Payments (BoP) statistics. Starting from October 2014 definitions are based on the Sixth Edition of the IMF's Balance of Payments and International Investment Position Manual (BPM6).

Table 3.4: Real effective exchange rate - 42 trading partners, HICP deflator (3 year % change)

Real effective exchange rate (REER) aims to assess a country's price or cost competitiveness relative to its principal competitors in international markets. Changes in cost and price competitiveness depend not only on exchange rate movements but also on cost and price trends. The specific REER for the MIP is deflated by the consumer price indices relative to a panel of 42 countries (double export weights are used to calculate REERs, reflecting not only competition in the home markets of the various competitors, but also competition in export markets elsewhere). The MIP scoreboard indicator is the percentage change over three years of REER.

Table 3.7: Export market share - % of world exports (1 year % change)

The export market share is calculated by dividing the exports (goods and services) of the country by the total exports of the region/world. The indicator is expressed as the percentage change over one year. The total world export data are based on International Monetary Fund (IMF) data.

Table 3.8: Nominal unit labour cost index, 2010=100 (3 year % change)

The Nominal unit labour cost (NULC) index is defined as the ratio of labour cost to labour productivity, where labour cost is the ratio of Compensation of employees (current prices) to the number of Employees, and labour productivity is the ratio of Gross domestic product (at market prices in millions, chain-linked volumes reference year 2010) to total Employment. Data on employees and employment are presented according to the domestic concept used in National accounts. The MIP Scoreboard indicator is the percentage change over three years. Input data are obtained from the official national accounts' country data, through ESA 2010 transmission programme.

Table 3.10: House price index (2015=100), deflated (1 year % change)

The deflated house price index (HPI), or real house price index, is the ratio between HPI and the national accounts deflator for private final consumption expenditure (households and non-profit institutions serving households (NPISHs)). The indicator measures inflation in the house market relative to inflation in the final consumption expenditure of households and NPISHs. Eurostat's HPI captures price changes of all residential properties purchased by households (flats, detached houses, terraced houses, etc.), both new and existing, independently of their final use and their previous owners. Only market prices are considered, self-build dwellings are therefore excluded. The land component is included. The MIP Scoreboard indicator is the one year percentage change of the deflated HPI. The indicator is based on Price statistics and National accounts data.

Table 3.11: Private sector credit flow, consolidated (% of GDP)

The private sector credit flow represents the net amount of liabilities in which the sectors Non-Financial corporations (S.11) and Households and Non-Profit institutions serving households (S.14_S.15) have incurred along the year. The instruments taken into account are Debt securities (F.3) and Loans (F.4). Data are presented in consolidated terms, i.e. data do not take into account transactions within the same sector and expressed in % of GDP. The indicator is based on National accounts data. Definitions regarding sectors and instruments are based on the ESA 2010 transmission programme.

Table 3.12: Private sector debt, consolidated (% of GDP)

The private sector debt is the stock of liabilities held by the sectors Non-Financial corporations (S.11) and Households and Non-Profit institutions serving households (S.14_S.15). The instruments taken into account are Debt securities (F.3) and Loans (F.4). Data are presented in consolidated terms, i.e. do not taking into account transactions within the same sector and expressed in % of GDP. The indicator is based on National accounts data. Definitions regarding sectors and instruments are based on the ESA 2010 transmission programme.

Table 3.13: General government gross debt (% of GDP)

Debt means total gross debt at nominal value outstanding at the end of the year and consolidated between and within the general government (as defined in the current Protocol 12, annexed to the 2012 consolidated version of the Treaty on the Functioning of the European Union). This definition is supplemented by Council Regulation (EC) No 479/2009, as amended by the Commission Regulation (EU) No 220/2014. The stock of government debt in the Excessive Deficit Procedure (EDP debt) is equal to the sum of liabilities, at the end of year, of all units classified within the general government (S.13) in the instruments: currency and deposits (F.2), debt securities (F.3) and loans (F.4). The MIP indicator is expressed in % of GDP. Data source from Government finance statistics.

Table 3.14: Unemployment rate (3 year average)

The unemployment rate is the number of unemployed persons expressed as a percentage of the labour force (the total number of people employed and unemployed), based on the International Labour Office (ILO) definition. Unemployed persons comprise persons aged 15 to 74 who fulfil all the three of the following conditions: were without work during the reference week; were available to start working within the two weeks following the reference week; and have been actively seeking work in the four weeks preceding the reference week or have already found a job to start within the next three months. The MIP Scoreboard indicator is the three-year backward moving average. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.16: Total financial sector liabilities, non-consolidated (1 year % change)

The total financial corporations sector liabilities measures the evolution of the sum of all liabilities (which includes Currency and deposits (F.2), Debt securities (F.3), Loans (F.4), Equity and investment fund shares (F.5), Insurance, pensions and standardised guarantees (F.6), Financial derivatives and employee stock options (F.7) and Other accounts payable (F.8) of the financial corporations sector (S.12). Data are presented in non-consolidated terms, i.e. data take into account transactions within the same sector and expressed as one year percentage change. The indicator is based on National accounts data. Definitions regarding sectors and instruments are based on the ESA 2010 transmission programme.

Table 3.17: Total financial sector liabilities, non-consolidated (Millions NC)

The total financial corporations sector liabilities measures the evolution of the sum of all liabilities (which includes Currency and deposits (F.2), Debt securities (F.3), Loans (F.4), Equity and investment fund shares (F.5), Insurance, pensions and standardised guarantees (F.6), Financial derivatives and employee stock options (F.7), and Other accounts payable (F.8) of the financial corporations sector (S.12). Data are presented in non-consolidated terms, i.e. data take into account transactions within the same sector and expressed in millions of national currency. The indicator is based on National accounts data. Definitions regarding sectors and instruments are based on the ESA 2010 transmission programme.

Table 3.18: Activity rate - % of total population aged 15-64 (3 year change in pp)

The long-term unemployment rate is the number of persons unemployed for 12 months or longer as a percentage of the labour force (the total number of people employed and unemployed). The unemployment rate is the number of unemployed persons as a percentage of the labour force based on the International Labour Office (ILO) definition. Unemployed persons comprise persons aged 15 to 74 who fulfil all three of the following conditions: were without work during the reference week; were available to start working within the two weeks following the reference week; and have been actively seeking work in the four weeks preceding the reference week or have already found a job to start within the next three months. The MIP Scoreboard indicator is the three years change in percentage points. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.19: Activity rate - % of total population aged 15-64

The activity rate is the percentage of economically active population aged 15-64 on the total population of the same age. According to the definitions of the International Labour Organisation (ILO) for the purposes of the labour market statistics people are classified as employed, unemployed and economically inactive. The economically active population (also called labour force) is the sum of employed and unemployed persons. Inactive persons are those who, during the reference week, were neither employed nor unemployed. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.20: Long-term unemployment rate - % of active population aged 15-74 (3 year change in pp)

The long-term unemployment rate is the number of persons unemployed for 12 months or longer as a percentage of the labour force (the total number of people employed and unemployed). The unemployment rate is the number of unemployed persons as a percentage of the labour force based on the International Labour Office (ILO) definition. Unemployed persons comprise persons aged 15 to 74 who fulfil all three of the following conditions: were without work during the reference week; were available to start working within the two weeks following the reference week; and have been actively seeking work in the four weeks preceding the reference week or have already found a job to start within the next three months. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.21: Long-term unemployment rate - % of active population aged 15-74

The long-term unemployment rate is the number of persons unemployed for 12 months or longer as a percentage of the labour force (the total number of people employed and unemployed). The unemployment rate is the number of unemployed persons as a percentage of the labour force based on the International Labour Office (ILO) definition. Unemployed persons comprise persons aged 15 to 74 who fulfil all three of the following conditions: were without work during the reference week; were available to start working within the two weeks following the reference week; and have been actively seeking work in the four weeks preceding the reference week or have already found a job to start within the next three months. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.24: Real GDP (1 year % change)

Gross domestic product (GDP) at market prices is the final result of the production activity of resident producer units. It is defined as the value of all goods and services produced less the value of any goods or services used in their creation. The ESA 2010 (European System of Accounts) regulation may be referred to for more specific explanations on methodology. Data are expressed as percentage change comparing year Y with year Y-1.

Table 3.25: Gross fixed capital formation (% of GDP)

Gross fixed capital formation (GFCF) consists of resident producers' acquisitions, less disposals, of fixed assets during a given period plus certain additions to the value of non-produced assets realised by the productive activity of producer or institutional units. GFCF includes acquisition less disposals of, e.g. buildings, structures, machinery and equipment, mineral exploration, computer software, literary or artistic originals and major improvements to land such as the clearance of forests. The input data are obtained through official national accounts' country data in the ESA 2010 transmission programme.

Table 3.26: Gross domestic expenditure on R&D (% of GDP)

Research and experimental development (R&D) comprise creative and systematic work undertaken in order to increase the stock of knowledge – including knowledge of humankind, culture and society – and to devise new applications of available knowledge (Frascati Manual, 2015 edition, § 2.5). The GDP used in denominator of the MIP indicator comes from the ESA 2010 transmission programme.

Table 3.27: Current plus capital account - Net lending-borrowing (% of GDP)

Net lending/borrowing of a country corresponds to the sum of total current and capital accounts' balances in balance of payments. It represents the net resources that the total economy makes available to the rest of the world (if it is positive) or receives from the rest of the world (if it is negative). The indicator is based on the Balance of Payments data.

Table 3.28: Net international investment position excluding non-defaultable instruments (% of GDP)

The indicator is a subset of the Net international investment position (NIIP) that abstracts from its pure equity-related components, i.e. foreign direct investment (FDI) equity and equity shares, and from intra-company cross-border FDI debt, and represents the NIIP excluding instruments that cannot be subject to default. The indicator is based on annual figures from the Eurostat Balance of Payments and is defined as the NIIP minus net direct investment minus net portfolio equity. It is calculated as a % of GDP and expressed in national currency.

Table 3.29: Foreign direct investment in the reporting economy - flows (% of GDP)

Foreign direct investment (FDI) is a category of investment that reflects the objective of establishing a lasting interest by a resident enterprise in one economy (direct investor) in an enterprise (direct investment enterprise) that is resident in an economy other than that of the direct investor. The lasting interest is deemed to exist if the investor acquires at least 10% of the voting power of the direct investment enterprise. Data are presented according to the asset/liability principle, compiled in the framework of balance of payments and are consistent with the components of national accounts statistics. Inward FDI flows represent the value of FDI liabilities from all countries of the world in the reporting economy in the reference period. Data are expressed as % of GDP to remove the effect of differences in the size of the economies of the reporting countries. Definitions are based on the IMF's Sixth Balance of Payments Manual (BPM6).

Table 3.30: Foreign direct investment in the reporting economy - stocks (% of GDP)

Foreign direct investment (FDI) is the category of investment made by an entity resident in an economy (direct investor) to acquire a lasting interest in an entity operating in an economy other than that of the investor (direct investment enterprise). The lasting interest is deemed to exist if the investor acquires at least 10% of the voting power of the of the direct investment enterprise. Data are presented according to the asset/liability principle, compiled in the framework of international investment position and are consistent with the components of national accounts statistics. Inward FDI stocks are the value of FDI liabilities from all countries of the world in the reporting economy at the end of the reference period. Data are expressed as percentage of GDP to remove the effect of differences in the size of the economies of the reporting countries. Definitions are based on the IMF's Sixth Balance of Payments Manual (BPM6).

Table 3.31: Net trade balance of energy products (% of GDP)

The trade balance of energy products is calculated, for each Member State, as the difference between exports to and imports from the rest of the world (intra-EU and extra-EU trade) of goods included in the SITC section 3 - Mineral fuels, lubricants and related materials. The data source from International trade statistic and is expressed as percentage of GDP (according to ESA 2010 transmission programme).

Table 3.32: Real effective exchange rate - Euro Area trading partners (3 year % change)

Real effective exchange rate (REER) aims to assess a country's price or cost competitiveness relative to its principal competitors in international markets. Changes in cost and price competitiveness depend not only on exchange rate movements but also on cost and price trends. The specific REER for the MIP is deflated by the consumer price indices relative to the Euro area countries (double export weights are used to calculate REERs, reflecting not only competition in the home markets of the various competitors, but also competition in export markets elsewhere). The MIP scoreboard indicator is the percentage change over three years of REER.

Table 3.33: Export performance against advanced economies (5 year % change)

The indicator shows developments in shares of exports of goods and services of EU Member States in relation to total exports of goods and services of 34 OECD countries (21 EU MSs and 13 non-EU countries). To capture the structural losses in competitiveness that can accumulate over longer time periods is calculated the 5 year % change (comparing year Y with year Y-5).

Table 3.34: Terms of trade (5 year % change)

A country's terms of trade measures a country's export prices in relation to its import prices. The indicator measures the country's trade competitiveness, as it indicates how much imports an economy can get for a unit of export goods. It is calculated as the ratio of the price index for exports of goods and services to the price index for imports of goods and services. These are obtained by dividing current prices by chain-linked volumes using the standard reference year 2010. Data are expressed as percentage change comparing year Y with the year Y-5. Data source: national accounts statistics.

Table 3.35: Export market share, volume (1 year % change)

The indicator is calculated by subtracting the world exports volume growth rate from the country exports volume growth rate. Eurostat's National accounts volumes for exports (as for all transactions concerning goods and services) are estimated in previous year prices to eliminate the influence of inflation. The volume growth rate is always calculated by comparing the year Y volume in previous year prices with the year Y-1 figure in current prices. The MIP indicator is expressed as percentage change comparing year Y with year Y-1. Country's exports of goods and services series are based on Eurostat data, while world exports of goods and services on IMF data, World Economic Outlook (WEO).

Table 3.36: Real labour productivity (1 year % change)

The labour productivity is the ratio of Gross domestic product (market prices in millions, chain-linked volumes reference year 2010) to the total Employment (domestic concept). The 'persons employed' does not distinguish between full-time and part-time employment. The GDP per person employed is intended to give an overall impression of the productivity of national economies expressed in relation to the European Union (EU28) average. The input data are obtained through official national accounts' country data in the ESA 2010 transmission programme. The MIP indicator is expressed as percentage change comparing year Y with year Y-1.

Table 3.37: Gross non-performing loans, domestic and foreign entities (% of gross loans)

A loan, other than held for trading, is considered as non-performing if satisfies either or both of the following criteria: (a) It is a material loan which is more than 90 days past-due; (b) The debtor is assessed as unlikely to pay its credit obligations in full without realisation of collateral, regardless of the existence of any past-due amount or of the number of days past-due. Non-performing loans include defaulted and impaired loans. The MIP indicator is defined as total gross non-performing loans and advances as % of total gross loans and advances (gross carrying amount), for the reporting sector "domestic banking groups and stand-alone banks, foreign controlled subsidiaries and foreign controlled branches, all institutions". Data on domestically controlled banks are consolidated across borders and sectors. Data source: European Central Bank (ECB).

Table 3.38: Unit labour cost performance relative to EA (10 year % change)

The relative unit labour cost (ULC) series measures the trading position of an individual country relative to its partners in the euro area and as such offers an indication about changes in its competitive position. The measure takes into account not only changes in market exchange rates, but also variations in relative price levels based on the unit labour cost and therefore can be used as indicators of competitiveness. The data are expressed as 10 year % change.

Table 3.39: House price index (2015=100) - nominal (3 year % change)

The House price index (HPI) captures price changes of all residential properties purchased by households (flats, detached houses, terraced houses, etc.), both new and existing, independently of their final use and their previous owners. Only market prices are considered, self-build dwellings are therefore excluded. The land component is included. The data are expressed as 3 years % change of the HPI. The indicator is based on Price statistics.

Table 3.40: Residential construction (% of GDP)

Residential Construction tracks the actual construction (not sales) of housing and is part of Gross fixed capital formation. GFCF consists of resident producers' acquisitions, less disposals, of fixed assets during a given period plus certain additions to the value of non-produced assets realised by the productive activity of producer or institutional units. Data source from national accounts statistics, using as a denominator GDP from the ESA 2010 transmission programme.

Table 3.41: Household debt, consolidated (incl. Non-profit institutions serving households, % of GDP)

The Household debt is the stock of liabilities held by the sector Households and Non-profit institutions serving households (S.14_S.15). The instruments that are taken into account to compile such indicator are Debt securities (F.3) and Loans (F.4). Data are presented in consolidated terms, i.e. not taking into account transactions within the same sector, and expressed in % of GDP and millions of national currency. Definitions regarding sector and instruments are based on ESA 2010.

Table 3.42: Consolidated banking leverage, domestic and foreign entities (asset-to-equity multiple)

The indicator, covering the banking sector only, is defined as total assets divided by total equity, for the reporting sector "domestic banking groups and stand-alone banks, foreign controlled subsidiaries and foreign controlled branches, all institutions, full sample (all banking groups / stand-alone banks irrespective of their accounting / supervisory framework)". Data source: European Central Bank (ECB).

Table 3.43: Employment rate (1 year % change)

Persons in employment are those who, during the reference week, did any work for pay or profit, or were not working but had a job from which they were temporarily absent. Anyone who receives a wage for on-the-job training that involves the production of goods or services is also considered as being in employment. Self-employed and family workers are also included. Data present employment in resident production units irrespective of the place of residence of the employed person (i.e. domestic scope). Employment rates represent employed persons aged 15-64, as a percentage of the same age population and it is measured in number of persons without distinction according to full-time or part-time work. Data are sourcing from national accounts statistics.

Table 3.44: Young people neither in employment nor in education and training - % of total population aged 15-24

The indicator young people neither in employment nor in education and training (NEET) provides information on young people aged 15 to 24 who meet the following two conditions: (a) they are not employed (i.e. unemployed or inactive according to the International Labour Organisation definition) and (b) they have not received any education or training in the four weeks preceding the survey. Data are expressed as a percentage of the total population in the same age group, excluding the respondents who have not answered the question 'participation to education and training'. Data come from the quarterly EU Labour Force Survey (EU LFS).

Table 3.45: People at risk of poverty or social exclusion - % of total population

This indicator corresponds to the percentage (of total population) of people who are: at risk of poverty or severely materially deprived or living in households with very low work intensity. Persons are only counted once even if they are present in several sub-indicators. At risk-of-poverty are persons with an equivalised disposable income below the risk-of-poverty threshold, which is set at 60% of the national median equivalised disposable income (after social transfers). Material deprivation covers indicators relating to economic strain and durables. Severely materially deprived persons have living conditions severely constrained by a lack of resources, they experience at least 4 out of 9 deprivations items. People living in households with very low work intensity are those aged 0-59 living in households where the adults (aged 18-59) work less than 20% of their total work potential during the past year. Students are excluded. The source of the data is EU Statistics on Income and Living Conditions (EU-SILC).□

Table 3.46: People at risk of poverty after social transfers - % of total population

The indicator measures persons with an equivalised disposable income below the risk-of-poverty threshold, which is set at 60% of the national median equivalised disposable income (after social transfers) as a % of total population. Data are expressed in percent of total population. The source of the data is EU Statistics on Income and Living Conditions (EU-SILC).

Table 3.47: Severely materially deprived people - % of total population

Severely materially deprived persons have living conditions severely constrained by a lack of resources. They experience a lack of at least 4 out of the 9 following deprivations items: i) to pay rent or utility bills, ii) keep home adequately warm, iii) face unexpected expenses, iv) eat meat, fish or a protein equivalent every second day, v) a week holiday away from home, vi) a car, vii) a washing machine, viii) a colour TV, or ix) a telephone. Data are expressed in percentage of total population. The source of the data is EU Statistics on Income and Living Conditions (EU-SILC).

Table 3.48: People living in households with very low work intensity - % of total population aged 0-59

People living in households with very low work intensity are people aged 0-59 living in households where the adults (aged 18-59) worked less than 20% of their total work potential during the past year. Students are excluded. Data are expressed in percent of population aged 0-59. The source of the data is EU Statistics on Income and Living Conditions (EU-SILC).
