BACKGROUND INFORMATION

This Statistical Annex to the 2022 Alert Mechanism Report (AMR 2022) presents the Macroeconomic Imbalance Procedure (MIP) scoreboard and auxiliary indicators used in the economic reading of the MIP scoreboard. The Statistical annex covers the years from 2011 to 2020. Eurostat mainly compiles MIP indicators from data transmitted by Member States, following European legislation. The MIP scoreboard indicators are presented with their indicative thresholds (used in the AMR), while no threshold is applied to the auxiliary indicators.

The policy framework of the MIP relies on timely and high quality socio-economic and financial statistics. Since the publication of the first Statistical Annex in 2012, significant progress has been achieved towards enhancing the standards and methods used for the compilation of underlying data as well as strengthening the statistical quality assurance framework.

The MIP Scoreboard consists of 14 scoreboard indicators measuring internal and external imbalances as well as social and labour market developments. The MIP scoreboard indicators for the last ten years are displayed in this statistical annex by year in chapter 1, and by country in chapter 4. Table 1 lists the MIP scoreboard indicators together with detailed information on their data sources.

The cut-off date for the data, that is the date on which the data were extracted from the Eurostat database for the preparation of this document, was **22nd October 2021**. For additional information about the data, please contact ESTAT-MIP@ec.europa.eu.

Table 1. MIP scoreboard indicators (AMR 2022)

Indicator	Unit	Data source	Statistical domain
Current account balance (% of GDP)	3 year average	Eurostat	BoP/NA
Net international investment position	% of GDP	Eurostat	BoP/NA
Real effective exchange rate (42 trading partners, HICP deflator)	3 year % change	DG ECFIN	
Export market share (% of world exports)	5 year % change	Eurostat, IMF	BoP
Nominal unit labour cost index (2010=100)	3 year % change	Eurostat	NA
House price index (2015=100), deflated	1 year % change	Eurostat	Price statistics/NA
Private sector credit flow, consolidated	% of GDP	Eurostat	NA (FA)
Private sector debt, consolidated	% of GDP	Eurostat	NA (FA)
General government gross debt	% of GDP	Eurostat	EDP/GFS
Unemployment rate	3 year average	Eurostat	EU-LFS
Total financial sector liabilities, non-consolidated	1 year % change	Eurostat	NA (FA)
Activity rate (% of total population aged 15-64)	3 year change in pp	Eurostat	EU-LFS
Long-term unemployment rate (% of active population aged 15-74)	3 year change in pp	Eurostat	EU-LFS
Youth unemployment rate (% of active population aged 15-24)	3 year change in pp	Eurostat	EU-LFS

Note: NA – National Accounts; BoP – Balance of Payments; FA – Financial Accounts; EDP – Excessive Deficit Procedure Statistics / GFS – Government Finance Statistics; and LFS – Labour Force Survey / Labour Market Statistics; pp – percentage points

Supplementing the MIP scoreboard indicators, a list of 28 auxiliary indicators (see Table 2) provides additional information on aspects linked to the general macroeconomic situation, nominal and real convergence inside and outside the European Union and the euro area,

detailed data on external liabilities, including foreign direct investment and net external debt, and social statistics. The auxiliary indicators enhance the information base for understanding potential imbalances, as well as the adjustment capacity of the economy. The auxiliary indicators are also presented in this Statistical Annex by year (in Chapter 2) and by country (in Chapter 5).

Table 2. MIP auxiliary indicators (AMR 2022)

Indicator	Unit	Data source	Statistical domain
Real GDP	1 year % change	Eurostat	NA
Gross fixed capital formation	% of GDP	Eurostat	NA
Gross domestic expenditure on R&D	% of GDP	Eurostat	Business Statistics/ NA
Current plus capital account (Net lending-borrowing)	% of GDP	Eurostat	BoP/NA
Net international investment position excluding non-defaultable instruments	% of GDP	Eurostat	BoP/ NA
Foreign direct investment in the reporting economy – net inward flows	% of GDP	Eurostat	BoP/NA
Foreign direct investment in the reporting economy - stocks	% of GDP	Eurostat	BoP/NA
Net trade balance of energy products	% of GDP	Eurostat	International Trade/ NA
Real effective exchange rates – euro area trading partners	3 year % change	DG ECFIN	
Export performance against advanced economies	5 year % change	Eurostat/ OECD	BoP
Terms of trade	5 year % change	Eurostat	NA
Export market share - in volume	1 year % change	Eurostat /IMF	
Labour productivity	1 year % change	Eurostat	NA
Gross non-performing loans, domestic and foreign entities	% of gross loans	ECB	CBD
Unit labour cost performance relative to euro area	10 year % change	DG ECFIN	
House price index (2015=100) - nominal	3 year % change	Eurostat	Price statistics
Residential construction	% of GDP	Eurostat	NA
Household debt, consolidated (incl. NPISH)	% of GDP	Eurostat	NA (FA)
Consolidated banking leverage	Total asset/ total equity	ECB	CBD
Employment	1 year % change	Eurostat	NA
Activity rate	% of total population aged 15-64	Eurostat	EU-LFS
Long term unemployment rate	% of active population aged 15-74	Eurostat	EU-LFS
Youth unemployment rate	% of active population aged 15-24	Eurostat	EU-LFS
Young people neither in employment nor in education and training	% of total population aged 15-24	Eurostat	EU-LFS
People at risk of poverty or social exclusion	% of total population	Eurostat	EU-SILC
People at risk of poverty after social transfers	% of total population	Eurostat	EU-SILC
Severely materially deprived people	% of total population	Eurostat	EU-SILC
People living in households with very low work intensity	% of total population aged 0-59	Eurostat	EU-SILC

Note: NA – National Accounts; BoP – Balance of Payments; CBD – Consolidated banking data; FA – Financial Accounts; LFS – Labour Force Survey/Labour Market Statistics; SILC – Statistics on Income and Living Conditions

In Chapter 3, the data are presented by indicator to allow easy comparison of Member States, for the 10-year time series. In addition, short descriptions of the indicators and detailed information on sources and methods employed for their compilation are provided.

STATISTICAL METHODOLOGY IMPROVEMENTS

Since 2014, MIP indicators stemming from the National Accounts (NA) and Balance of Payments (BoP) and International Investment Position (IIP) domains have been computed following the ESA 2010 and BPM6 statistical standards (the European System of Accounts 2010 and the Balance of Payments and International Investment Position Manual, 6th edition) that guarantee a high level of comparability across European Union Member States.

The implementation of the standards ensures conceptual consistency between National Accounts and Balance of Payments / International Investment Position. However, in practice, differences in the components of the accounts (the BoP/IIP and NA Rest of the world data) still persist.

Eurostat has further elaborated on the reconciliation of the Balance of Payments and the Rest of the World (RoW) account at national level, and regularly assesses the state of consistency between Balance of Payments and National Accounts statistics.

Additional changes in 2020

Concerning the COVID-19 pandemic, which impacted the ability of statistical authorities to collect and process data in the traditional manner, Eurostat and national statistical authorities in the European Statistical System (ESS) have worked together to elaborate guidelines and notes¹ on how to address the methodological issues triggered by these changes in statistical production. This ensured that European statistics continued to be based on sound foundations.

The COVID-19 pandemic's impact on 2020 economic data was substantial. Notably, drops in GDP were sharper than during the 2008/9 economic and financial crisis in most countries, with the highest contractions in the output of trade, transport, accommodation and food service activities, as well as industry, and impacts on both external trade and private consumption (on the expenditure side). This impacted on indicators expressed as a percentage of GDP. There was also a large impact of COVID-19 on the employment data, especially for hours worked, while employment in persons decreased less, due to the government support measures to preserve employment. Therefore, labour productivity and unit labour cost should be interpreted with caution for 2020, especially for indicators based on employed persons rather than hours worked.

The implementation of the harmonised European revision policy (HERP) for **National Accounts** and Balance of Payments statistics covering benchmark and routine revisions is progressing on a voluntary basis². All Member States³ have now carried out benchmark revisions since the introduction of ESA 2010 in September 2014, with Luxembourg completing the exercise in September 2021.

While the introduction of benchmark revisions is usually associated with more significant data updates, such revisions improve the overall quality and consistency of data through further improvements in the methodology, sources or estimation techniques applied. The revisions often relate to statistical improvements and actions agreed in the context of the verification of GNI and/or EDP data. The coordinated benchmark revisions were considered

¹ <https://ec.europa.eu/eurostat/data/metadata/covid-19-support-for-statisticians>

² Information on data revisions and on the publication of benchmark data is available on the Eurostat website: <https://ec.europa.eu/eurostat/web/esa-2010/esa-2010-implementation-and-data-quality> and https://ec.europa.eu/eurostat/documents/737960/9861115/Benchmark_revisions_2019.pdf

³ Greece has still to complete its revision for back years prior to 2010.

successfully implemented and improved the quality of the accounts. The good practices developed will be retained for the next harmonised benchmark revisions in 2024.

The COVID-19 crisis has impacted the compilation of **Balance of Payments** statistics. Eurostat and ECB jointly published on 1 July 2020 a note “Guidance on the compilation of balance of payments statistics in the context of the Covid-19 crisis”. This joint guidance note elaborated on common and alternative data sources that can be used to compile the Balance of Payments statistics. It provided additional advice on data collection and compilation to ensure continuity; and provided guidance on data and metadata dissemination.

In the **Balance of Payments** domain, progress has been made in particular concerning the asymmetries in trade in goods and services. In summer 2020, Eurostat launched a comprehensive survey on asymmetries in services, in which thirty countries participated. The survey elaborates on data sources used by countries, and their contribution to the reported values (impact) on the compilation of Extended Balance of Payments Services (EBOPS) categories. Based on the results, in close cooperation with the Balance of Payments Working Group, Eurostat has broadened the scope of its work and intends to publish an “Inventory of identified causes of asymmetries in trade in goods and services, primary income, and foreign direct investments, and the related methodology”.

In addition, Asymmetries Resolution Meetings (ARM) are set up by ECB and Eurostat in the context of the quarterly BOP production. The purpose of ARM is to facilitate bilateral and/or multilateral reconciliation exercises to reduce bilateral asymmetries in foreign direct investment.

In the domain of **Financial Accounts**, regarding Total Financial Sector Liabilities, work is ongoing to ensure a comprehensive and timely coverage of Other financial institutions (OFIs). Other areas of ongoing or planned statistical work which are important for the quality of MIP indicators concern the recording of other equity, of derivatives, of loans between non-financial corporations, of foreign-controlled corporations, and of the vertical discrepancy with non-financial sector accounts. On the latter, Eurostat and the ECB are cooperating in order to develop methodology and propose a solution for reducing the discrepancies. It is aimed to further align the national revision policies and practices in financial accounts to the harmonized European revision policy.

Concerning the **Labour Force Survey**, no major methodological changes were implemented during 2020. In view of the entry into force of the Framework Regulation 2019/1700 (IESS FR) in the beginning of 2021, all countries postponed methodological changes, in order to introduce them together with the new standards provided by the regulation. An exception is the German data, due to the introduction of the new German system of integrated household surveys, including the LFS. German 2020 data are not directly estimated from LFS micro-data, but are based on a larger sample including additional data from other integrated household surveys, with the intention to return to purely LFS-based data as soon as possible.

Nevertheless, the spread of COVID-19 across Europe implied that field activities have been halted in many countries. This has negatively impacted the collection of household survey data during 2020 and put simultaneous pressures on the producers of EU-LFS data: data collection impacted by decreases in the overall volume of attempted interviews, higher non-response and changes in the shares of interview modes. At the same time, the real impact of

the crisis has led to large shifts in the labour market, with loss of labour inputs both in headcounts and in working hours. The European Statistical System reacted quickly, with the purpose of providing data allowing the users to evaluate these shifts, and compare data over time and between countries. Eurostat drafted a series of methodological papers to guide, in a harmonised way, the reactions of the EU National Statistical Institutes to the COVID-19 crisis.

In the **House Prices** domain, the index for France has been slightly revised for the years 2011 to 2019 following an improvement in the estimation methods for the weights for new and existing dwellings.

General Government Gross Debt data notified for the years 2017 to 2020 were released on 21 October 2021 within the EDP notification. For more information on the main revisions between the April 2021 and the October 2021 notifications please see the latest [EDP news release](#).

Timeliness and availability of general government gross debt data remained generally excellent despite the COVID-19 pandemic-related challenges. Extensive guidance on the recording of policy measures to combat the effects of the COVID-19 pandemic was developed and a specific reporting template aided in maintaining the accuracy of data reported.

THE MIP QUALITY FRAMEWORK

The credibility of the MIP and its smooth implementation depends critically on the availability and quality of the MIP underlying statistics. The statistics used in the procedure have to be fit for the purpose, reliable and comparable among Member States and in time. For that reason, the scoreboard indicators are regularly reviewed; the underlying statistical methodology and the statistical production processes are constantly improved. Statistics underlying the MIP indicators are based on European Union legislation and compiled by the ESS and in part by the European System of Central Banks (ESCB).

In 2020, the Economic and Financial Affairs Council (ECOFIN)⁴ welcomed the progress on quality assurance of statistics underlying the MIP, and appreciated the annual ESS-ESCB quality assessment report on MIP statistics by Eurostat and the ECB, taking note of the actions identified therein.

The MIP quality assurance framework, developed jointly by Eurostat and the Directorate General Statistics of the European Central Bank, follows a three-level structure. A comprehensive [webpage](#)⁵ with information and links to all relevant quality documents is available on the MIP dedicated section of Eurostat website. In this framework, the work performed consisted of the following actions:

- Level 1: preparation of an annual ESS-ESCB quality assessment report on MIP statistics by Eurostat and the ECB towards the European Parliament and Council, policy makers and the public at large, to assess the reliability and comparability of

⁴ Council conclusions of ECOFIN Council meeting on 6 November 2020 - <https://data.consilium.europa.eu/doc/document/ST-12693-2020-INIT/en/pdf>

⁵ <https://ec.europa.eu/eurostat/web/macroeconomic-imbances-procedure/quality>

MIP underlying statistics and address the most relevant quality issues. The seventh report was published on 7 July 2021 on the websites of Eurostat, the ECB, and of the Committee on Monetary, Financial and Balance of Payments Statistics (CMFB). The report relates to recent developments, with a clear separation from more permanent features.

- Level 2: domain-specific quality reports produced by Eurostat and the ECB summarising the main findings for the euro area or the European Union Member States. These reports assess the underlying compilation process and its robustness, describe its legal basis and evaluate whether the statistics are in line with international statistical standards. The following level 2 reports are currently available:
 - National Accounts (including Financial Accounts) ([Eurostat](#)) and Financial Accounts ([ECB](#))
 - Balance of Payments and International Investment Position statistics ([Eurostat](#), [ECB](#))
 - House Price Statistics ([Eurostat](#))
 - Labour Force Survey ([Eurostat](#))

In line with the legal requirements of quality reporting for national and regional accounts⁶, the fourth annual Eurostat quality report was published on 18 December 2020⁷, and covered data transmissions in 2019 in line with the ESA 2010 transmission programme. The fifth quality report, based on 2020 data, is close to completion. The Eurostat quality report also explicitly covers data underlying the MIP indicators. In 2021, the complete set of quality indicators was applied for the assessment of 2020 data transmissions, in line with the requirements of the 2016 implementing regulation. An overview on ESA 2010 implementation and quality is available on the Eurostat website⁸. All ESA 2010 derogations expired on 1 January 2020. Eurostat is closely monitoring remaining compliance gaps and encouraging countries to address them urgently.

The implementation of the alignment of the existing Quality Reports on Balance of Payments/International Investment Position produced by the ESS and the ESCB has been achieved. While due to the different data coverage and legislation, it is currently not possible to have one common report, its structure, the indicators and the findings included in the Eurostat and the ECB reports are harmonized to a large extent.

In addition, the Commission (DG ECFIN), in its capacity as compiler of the Real Effective Exchange Rate (REER) indicator, publishes quality information on real effective exchange rate indicators on its website⁹.

⁶ http://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv%3AOJ.L_.2016.345.01.0027.01.ENG

Commission Implementing Regulation (EU) 2016/2304 of 19 December 2016 on the modalities, structure, periodicity and assessment indicators of the quality reports on data transmitted pursuant to Regulation (EU) No 549/2013 of the European Parliament and of the Council, OJ L 345, 20.12.2016, p. 27-36.

- Level 3: development of condensed country specific self-assessment reports on the quality and statistical processes for statistics underlying the MIP indicators that are easily understandable by users. They should provide the basis for assuring the quality of the statistics and their comparability across countries. Member States are encouraged to publish such reports. The latest updates to the level 3 are usually published on the CMFB website¹⁰; in particular, House Price Statistics reports were updated in 2020 and Financial Accounts ones in 2021, for almost all countries.

Moreover, in the context of the MoU, joint ECB-Eurostat visits to the Member States have taken place, focusing on Balance of Payments and Financial Accounts. The next visit is planned to Finland in 2022.

The rest of this document presents MIP scoreboard and auxiliary indicators by different perspectives: Chapter 1 and Chapter 2 illustrate the headline and auxiliary indicators by year respectively, Chapter 3 focuses on the evolution of indicators in time, while Chapter 4 and Chapter 5 present the scoreboard and auxiliary indicators by Member State respectively, and finally Chapter 6 illustrates untransformed scoreboard indicators by year.

Flags:b:Break in series. p:Provisional.

1) Labour Force Survey indicators, b = data collection improvement, introduction of CAWI (computer-assisted web interviewing) technique for DK. 2) Young people neither in employment nor in education and training, b = data are impacted from the changes in the questionnaire introduced in 2013 and inclusion of French overseas departments (DROM) for FR. 3) Income and Living Conditions indicators, b = for BG, the increase of rotational groups from 4 to 6 in 2016 leads to increase of overall sample size. The number of pensioners (from National Social Security Institute) was used as calibration variable for the first time; b = for LU, new procedures developed in data validation and compilation, weighting, estimation and imputation, adjustment. Better coverage of certain segments of the resident population by use of Luxembourg's National Population Register; b = for NL, introduction of CAWI, oversampling of lower income groups, use of register information for housing costs, changes in fieldwork period, weighting, calculation of imputed rent.

Chapter 3: Tables by indicator

Table 3.1: Current account balance, % of GDP (3 year average)

The Current account provides information about the transactions of a country with the rest of the world. It covers all transactions (other than those in financial items) in goods, services, primary income and secondary income, which occur between resident and non-resident units. The MIP scoreboard indicator is the three-year backward moving average of the current account balance expressed in percentage of GDP. The indicator is based on Balance of Payments (BoP) data. Starting from October 2014 definitions are based on the Sixth Edition of the IMF's Balance of Payments and International Investment Position Manual (BPM6).

Table 3.3: Net International Investment Position (% of GDP)

The international investment position (IIP) is a statistical statement that shows at a point in time the value and composition of financial assets of residents of an economy that are claims on non-residents and gold bullion held as reserve assets, and liabilities of residents of an economy to non-residents. The difference between an economy's external financial assets and liabilities is the economy's net IIP (NIIP), which may be positive or negative. The NIIP provides an aggregate view of the net financial position (assets minus liabilities) of a country vis-à-vis the rest of the world. The MIP scoreboard indicator is expressed in percentage of GDP and based on Balance of Payments (BoP) statistics. Starting from October 2014 definitions are based on the Sixth Edition of the IMF's Balance of Payments and International Investment Position Manual (BPM6).

Table 3.4: Real effective exchange rate - 42 trading partners, HICP deflator (3 year % change)

Real effective exchange rate (REER) aims to assess a country's price or cost competitiveness relative to its principal competitors in international markets. Changes in cost and price competitiveness depend not only on exchange rate movements but also on cost and price trends. The specific REER for the Macroeconomic Imbalance Procedure is deflated by the consumer price indices relative to a panel of 42 countries (double export weights are used to calculate REERs, reflecting not only competition in the home markets of the various competitors, but also competition in export markets elsewhere). A positive value means real appreciation. The MIP scoreboard indicator is the percentage change over three years of the real effective exchange rate based on consumer price index deflators relative to 42 trading partners.

Table 3.5: Real effective exchange rate - 42 trading partners, HICP deflator (1 year % change)

Real effective exchange rate (REER) aims to assess a country's price or cost competitiveness relative to its principal competitors in international markets. Changes in cost and price competitiveness depend not only on exchange rate movements but also on cost and price trends. The specific REER for the MIP is deflated by the consumer price indices relative to a panel of 42 countries (double export weights are used to calculate REERs, reflecting not only competition in the home markets of the various competitors, but also competition in export markets elsewhere). The indicator is the 1-year percentage change of REER.

Table 3.8: Nominal unit labour cost index, 2010=100 (3 year % change)

The Nominal unit labour cost (NULC) index is defined as the ratio of labour cost to labour productivity, where labour cost is the ratio of Compensation of employees (current prices) to the number of Employees, and labour productivity is the ratio of Gross domestic product (at market prices in millions, chain-linked volumes reference year 2010) to total Employment. Data on employees and employment are presented according to the domestic concept used in National accounts. The MIP Scoreboard indicator is the percentage change over three years. Input data are obtained from the official National accounts' country data, through ESA 2010 transmission programme.

Table 3.10: House price index (2015=100), deflated (1 year % change)

The deflated house price index (HPI), or real house price index, is the ratio between HPI and the national accounts deflator for private final consumption expenditure (households and non-profit institutions serving households (NPISHs)). The indicator measures inflation in the house market relative to inflation in the final consumption expenditure of households and NPISHs. Eurostat's HPI captures price changes of all residential properties purchased by households (flats, detached houses, terraced houses, etc.), both new and existing, independently of their final use and their previous owners. Only market prices are considered, self-built dwellings are therefore excluded. The land component is included. The MIP Scoreboard indicator is the 1-year percentage change of the deflated HPI. The indicator is based on Price statistics and National accounts data.

Table 3.11: Private sector credit flow, consolidated (% of GDP)

The private sector credit flow represents the net amount of liabilities in which the sectors Non-financial corporations (S.11), Households and Non-profit institutions serving households (S.14_S.15) have incurred along the year. The instruments taken into account are Debt securities (F.3) and Loans (F.4). Data are presented in consolidated terms, i.e. data do not take into account transactions within the same sector and are expressed in percentage of GDP. The indicator is based on National accounts data. Definitions regarding sectors and instruments are based on the ESA 2010 transmission programme.

Source: European Commission, Eurostat

Table 3.13: General government gross debt (% of GDP)

Debt means total gross debt at nominal (face) value outstanding at the end of the year and consolidated between and within the general government (as defined in the current Protocol 12, annexed to the 2012 consolidated version of the Treaty on the Functioning of the European Union). This definition is supplemented by Council Regulation (EC) No 479/2009, as amended by the Commission Regulation (EU) No 220/2014. The stock of government debt in the Excessive Deficit Procedure (EDP debt) is equal to the sum of liabilities, at the end of year, of all units classified within the general government (S.13) in the instruments: currency and deposits (F.2), debt securities (F.3) and loans (F.4). The MIP indicator is expressed in % of GDP. Data source from Government finance statistics.

Table 3.14: Unemployment rate (3 year average)

The unemployment rate is the number of unemployed persons expressed as a percentage of the labour force (the total number of people employed and unemployed), based on the International Labour Office (ILO) definition. Unemployed persons comprise persons aged 15 to 74 who fulfil all three of the following conditions: were without work during the reference week; were available to start working within the two weeks following the reference week; and have been actively seeking work in the four weeks preceding the reference week or have already found a job to start within the next three months. The MIP Scoreboard indicator is the 3-year backward moving average. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.15: Unemployment rate (%)

The unemployment rate is the number of unemployed persons expressed as a percentage of the labour force (the total number of people employed and unemployed), based on the International Labour Office (ILO) definition. Unemployed persons comprise persons aged 15 to 74 who fulfil all three of the following conditions: were without work during the reference week; were available to start working within the two weeks following the reference week; and have been actively seeking work in the four weeks preceding the reference week or have already found a job to start within the next three months. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.16: Total financial sector liabilities, non-consolidated (1 year % change)

The total Financial corporations sector liabilities measures the evolution of the sum of liabilities, which includes Currency and deposits (F.2), Debt securities (F.3), Loans (F.4), Equity and investment fund shares (F.5), Insurance, pensions and standardised guarantees (F.6), Financial derivatives and employee stock options (F.7) and Other accounts payable (F.8) of the Financial corporations sector (S.12). Data are presented in non-consolidated terms, i.e. data take into account transactions within the same sector and are expressed as 1-year percentage change. The indicator is based on National accounts data. Definitions regarding sectors and instruments are based on the ESA 2010 transmission programme.

Table 3.18: Activity rate - % of total population aged 15-64 (3 year change in pp)

The activity rate is the percentage of economically active population aged 15-64 on the total population of the same age. According to the definitions of the International Labour Organisation (ILO) for the purposes of the labour market statistics people are classified as employed, unemployed or outside the labour force. The economically active population (also called labour force) is the sum of employed and unemployed persons. Persons outside the labour force are those who, during the reference week, were neither employed nor unemployed. The MIP Scoreboard indicator is the 3-year change in percentage points. The data source is the quarterly EU Labour Force Survey (EU LFS). The survey covers the resident population in private households.

Table 3.19: Activity rate - % of total population aged 15-64

The activity rate is the percentage of economically active population aged 15-64 on the total population of the same age. According to the definitions of the International Labour Organisation (ILO) for the purposes of the labour market statistics people are classified as employed, unemployed or outside the labour force. The economically active population (also called labour force) is the sum of employed and unemployed persons. Persons outside the labour force are those who, during the reference week, were neither employed nor unemployed. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.20: Long-term unemployment rate - % of active population aged 15-74 (3 year change in pp)

The long-term unemployment rate is the number of persons unemployed for 12 months or longer as a percentage of the labour force (the total number of people employed and unemployed). The unemployment rate is the number of unemployed persons as a percentage of the labour force based on the International Labour Office (ILO) definition. Unemployed persons comprise persons aged 15 to 74 who fulfil all three of the following conditions: were without work during the reference week; were available to start working within the two weeks following the reference week; and have been actively seeking work in the four weeks preceding the reference week or have already found a job to start within the next three months. The MIP Scoreboard indicator is the 3-year change in percentage points. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.23: Youth unemployment rate - % of active population aged 15-24

The youth unemployment rate is the unemployment rate of people aged 15-24 as a percentage of the labour force (the total number of people employed and unemployed) of the same age. The unemployment rate is the number of unemployed persons as a percentage of the labour force based on the International Labour Office (ILO) definition. Unemployed persons comprise persons aged 15 to 74 who fulfil all three of the following conditions: were without work during the reference week; were available to start working within the two weeks following the reference week; and have been actively seeking work in the four weeks preceding the reference week or have already found a job to start within the next three months. The data source is the quarterly EU Labour Force Survey (EU LFS), which covers the resident population in private households.

Table 3.24: Real GDP (1 year % change)

Gross domestic product (GDP) at market prices is the final result of the production activity of resident producer units. It is defined as the value of all goods and services produced less the value of any goods or services used in their creation. The ESA 2010 (European System of Accounts) regulation may be referred to for more specific explanations on methodology. Data are expressed as 1-year percentage change.

Table 3.25: Gross fixed capital formation (% of GDP)

Gross fixed capital formation (GFCF) consists of resident producers' acquisitions, less disposals, of fixed assets during a given period plus certain additions to the value of non-produced assets realised by the productive activity of producer or institutional units. GFCF includes acquisition less disposals of, e.g. buildings, structures, machinery and equipment, mineral exploration, computer software, literary or artistic originals and major improvements to land such as the clearance of forests. The input data are obtained through official National accounts' country data in the ESA 2010 transmission programme.

Table 3.26: Gross domestic expenditure on R&D (% of GDP)

Research and experimental development (R&D) comprise creative and systematic work undertaken in order to increase the stock of knowledge – including knowledge of humankind, culture and society – and to devise new applications of available knowledge (Frascati Manual, 2015 edition, § 2.5). The GDP used in the denominator of the MIP indicator comes from the ESA 2010 transmission programme.

Table 3.27: Current plus capital account - Net lending-borrowing (% of GDP)

Net lending/borrowing of a country corresponds to the sum of total current and capital accounts' balances in balance of payments. It represents the net resources that the total economy makes available to the rest of the world (if it is positive) or receives from the rest of the world (if it is negative). The indicator is based on the Balance of Payments data. Definitions are based on the IMF's Sixth Balance of Payments Manual (BPM6).

Table 3.28: Net international investment position excluding non-defaultable instruments (% of GDP)

The indicator is a subset of the Net international investment position (NIIP) that abstracts from its pure equity-related components, i.e. foreign direct investment (FDI) equity and equity shares, and from intra-company cross-border FDI debt, and represents the NIIP excluding instruments that cannot be subject to default. The indicator is based on annual figures from the Eurostat Balance of Payments and is defined as the NIIP minus net direct investment minus net portfolio equity. The indicator is calculated as a percentage of GDP.

Table 3.29: Foreign direct investment in the reporting economy - flows (% of GDP)

Foreign direct investment (FDI) is a category of investment that reflects the objective of establishing a lasting interest by a resident enterprise in one economy (direct investor) in an enterprise (direct investment enterprise) that is resident in an economy other than that of the direct investor. The lasting interest is deemed to exist if the investor acquires at least 10% of the voting power of the direct investment enterprise. Data are presented according to the asset/liability principle, compiled in the framework of Balance of payments and are consistent with the components of National accounts statistics. Inward FDI flows represent the value of FDI liabilities from all countries of the world in the reporting economy in the reference period. Data are expressed as percentage of GDP to remove the effect of differences in the size of the economies of the reporting countries. Definitions are based on the IMF's Sixth Balance of Payments Manual (BPM6).

Table 3.30: Foreign direct investment in the reporting economy - stocks (% of GDP)

Foreign direct investment (FDI) is the category of investment made by an entity resident in an economy (direct investor) to acquire a lasting interest in an entity operating in an economy other than that of the investor (direct investment enterprise). The lasting interest is deemed to exist if the investor acquires at least 10% of the voting power of the direct investment enterprise. Data are presented according to the asset/liability principle, compiled in the framework of International investment position and are consistent with the components of National accounts statistics. Inward FDI stocks are the value of FDI liabilities from all countries of the world in the reporting economy at the end of the reference period. Data are expressed as percentage of GDP to remove the effect of differences in the size of the economies of the reporting countries. Definitions are based on the IMF's Sixth Balance of Payments Manual (BPM6).

Table 3.31: Net trade balance of energy products (% of GDP)

The trade balance of energy products is calculated, for each Member State, as the difference between exports to and imports from the rest of the world (intra-EU and extra-EU trade) of goods included in the SITC section 3 - Mineral fuels, lubricants and related materials. The data source from International trade statistics and is expressed as percentage of GDP (according to ESA 2010 transmission programme).

Table 3.32: Real effective exchange rate - euro area trading partners (3 year % change)

Real effective exchange rate (REER) aims to assess a country's price or cost competitiveness relative to its principal competitors in international markets. Changes in cost and price competitiveness depend not only on exchange rate movements but also on cost and price trends. The specific REER for the MIP is deflated by the consumer price indices relative to the euro area countries (double export weights are used to calculate REERs, reflecting not only competition in the home markets of the various competitors, but also competition in export markets elsewhere). The MIP scoreboard indicator is the percentage change over three years of REER.

Table 3.33: Export performance against advanced economies (5 year % change)

The indicator shows developments in shares of exports of goods and services of EU Member States in relation to total exports of goods and services of OECD countries. To capture the structural losses in competitiveness that can accumulate over longer time periods, the indicator is calculated as the 5-year percentage change.

Table 3.34: Terms of trade (5 year % change)

A country's terms of trade measures a country's export prices in relation to its import prices. The indicator measures the country's trade competitiveness, as it indicates how much imports an economy can get for a unit of export of goods and services. It is calculated as the ratio of the price index for exports of goods and services to the price index for imports of goods and services. These are obtained by dividing current prices by chain-linked volumes using the standard reference year 2010. Data are expressed as 5-year percentage change. Data source: National accounts statistics.

Table 3.35: Export market share, volume (1 year % change)

The indicator is calculated by subtracting the world exports volume growth rate from the country exports volume growth rate. Eurostat's National accounts volumes for exports (as for all transactions concerning goods and services) are estimated in previous year prices to eliminate the influence of inflation. The volume growth rate is always calculated by comparing the year Y volume in previous year prices with the year Y-1 figure in current prices. The MIP indicator is expressed as percentage change comparing year Y with year Y-1. Country's exports of goods and services series are based on Eurostat data, while world exports of goods and services on IMF data, World Economic Outlook (WEO).

Table 3.36: Real labour productivity (1 year % change)

The labour productivity is the ratio of Gross domestic product (market prices in millions, chain-linked volumes reference year 2010) to the total Employment (domestic concept). The 'persons employed' does not distinguish between full-time and part-time employment. The GDP per person employed is intended to give an overall impression of the productivity of national economies. The input data are obtained through official National accounts' country data in the ESA 2010 transmission programme. The MIP indicator is expressed as 1-year percentage change.

Table 3.37: Gross non-performing loans, domestic and foreign entities (% of gross loans)

A loan, other than held for trading, is considered as non-performing if it satisfies either or both of the following criteria: (a) It is a material loan which is more than 90 days past-due; (b) The debtor is assessed as unlikely to pay its credit obligations in full without realisation of collateral, regardless of the existence of any past-due amount or of the number of days past-due. Non-performing loans include defaulted and impaired loans. The MIP indicator is defined as total gross non-performing loans and advances as percentage of total gross loans and advances (gross carrying amount), for the reporting sector "domestic banking groups and stand-alone banks, foreign controlled subsidiaries and foreign controlled branches, all institutions". Data on domestically controlled banks are consolidated across borders and sectors. Data source: European Central Bank (ECB).

Table 3.38: Unit labour cost performance relative to EA (10 year % change)

The relative unit labour cost (ULC) series measures the trading position of an individual country relative to its partners in the euro area and as such offers an indication about changes in its competitive position. The measure takes into account not only changes in market exchange rates, but also variations in relative price levels based on the unit labour cost and therefore can be used as indicator of competitiveness. The data are expressed as 10-year % change.

Table 3.39: House price index (2015=100) - nominal (3 year % change)

The House price index (HPI) captures price changes of all residential properties purchased by households (flats, detached houses, terraced houses, etc.), both new and existing, independently of their final use and their previous owners. Only market prices are considered, self-built dwellings are therefore excluded. The land component is included. The data are expressed as 3-year % change of the HPI. The indicator is based on Price statistics.

Table 3.40: Residential construction (% of GDP)

Residential Construction tracks the actual construction (not sales) of housing and is part of Gross fixed capital formation. GFCF consists of resident producers' acquisitions, less disposals, of fixed assets during a given period plus certain additions to the value of non-produced assets realised by the productive activity of producer or institutional units. Data source from National accounts statistics, using as a denominator GDP from the ESA 2010 transmission programme.

Table 3.41: Household debt, consolidated (incl. Non-profit institutions serving households, % of GDP)

The Household debt is the stock of liabilities held by the sector Households and Non-profit institutions serving households (S.14_S.15). The instruments that are taken into account to compile such indicator are Debt securities (F.3) and Loans (F.4). Data are presented in consolidated terms, i.e. not taking into account transactions within the same sector, and are expressed in percentage of GDP and millions of national currency. Definitions regarding sector and instruments are based on ESA 2010.

Table 3.43: Employment (1 year % change)

Persons in employment are those who, during the reference week, did any work for pay or profit, or were not working but had a job from which they were temporarily absent. Anyone who receives a wage (in cash or in kind) for on-the-job training that involves the production of goods or services is also considered as being in employment. Self-employed and family workers are also included. Data present employment in resident production units irrespective of the place of residence of the employed person (i.e. domestic scope). Employment growth rates are based on number of persons without distinction according to full-time or part-time work. Data are sourced from National accounts statistics.

Table 3.44: Young people neither in employment nor in education and training - % of total population aged 15-24

The indicator young people neither in employment nor in education and training (NEET) provides information on young people aged 15 to 24 who meet the following two conditions: (a) they are not employed (i.e. unemployed or inactive according to the International Labour Organisation definition) and (b) they have not received any education or training in the four weeks preceding the survey. Data are expressed as a percentage of the total population in the same age group, excluding the respondents who have not answered the question 'participation to education and training'. The data source is the quarterly EU Labour Force Survey (EU LFS).

Table 3.45: People at risk of poverty or social exclusion - % of total population

This indicator corresponds to the percentage (of total population) of people who are: at risk of poverty or severely materially deprived or living in households with very low work intensity. Persons are only counted once even if they are present in several sub-indicators. At risk-of-poverty are persons with an equivalised disposable income below the risk-of-poverty threshold, which is set at 60% of the national median equivalised disposable income (after social transfers). Material deprivation covers indicators relating to economic strain and durables. Severely materially deprived persons have living conditions severely constrained by a lack of resources, they experience at least 4 out of 9 deprivations items. People living in households with very low work intensity are those aged 0-59 living in households where the adults (aged 18-59) worked less than 20% of their total work potential during the past year. Students are excluded. The source of the data is EU Statistics on Income and Living Conditions (EU-SILC).

Table 3.47: Severely materially deprived people - % of total population

Severely materially deprived persons have living conditions severely constrained by a lack of resources. They experience a lack of at least 4 out of the 9 following deprivations items: i) to pay rent or utility bills, ii) keep home adequately warm, iii) face unexpected expenses, iv) eat meat, fish or a protein equivalent every second day, v) a week holiday away from home, vi) a car, vii) a washing machine, viii) a colour TV, or ix) a telephone. Data are expressed in percentage of total population. The source of the data is EU Statistics on Income and Living Conditions (EU-SILC).

Table 3.48: People living in households with very low work intensity - % of total population aged 0-59

People living in households with very low work intensity are people aged 0-59 living in households where the adults (aged 18-59) worked less than 20% of their total work potential during the past year. Students are excluded. Data are expressed in percentage of population aged 0-59. The source of the data is EU Statistics on Income and Living Conditions (EU-SILC).
