Opinion

Title: Impact assessment / Revision of the Union legislation on blood, tissues and cells

Overall opinion: POSITIVE WITH RESERVATIONS

(A) Policy context

The initiative forms part of the EU's ambition to build a stronger European Health Union. The legislation concerned is the Blood Directive 2002/98/EC and the Tissues and Cells Directive 2004/23/EC (the BTC legislation). These have helped to ensure the safety of patients undergoing blood transfusion, tissues transplantation and medically assisted reproduction. The legislation sets out quality and safety requirements for all steps from donation to human application, unless the donations are used to manufacture medicinal products or medical devices. In these cases the legislation only applies to donation, collection and testing.

Shortcomings were identified in an evaluation in 2019 and through the COVID-19 experience. This initiative aims to ensure a high level of health protection for patients and donors, strengthen oversight arrangements, support innovation and improve the resilience of the sector.

(B) Summary of findings

The Board notes the information provided in advance of the meeting and commitments to make changes to the report.

However, the report still contains significant shortcomings. The Board gives a positive opinion with reservations because it expects the DG to rectify the following aspects:

- (1) The report is not sufficiently clear on the scope of the initiative and how it interacts coherently with the other ongoing initiatives in the health area.**
- (2) The report does not discuss the change of legal instrument and how this leaves sufficient room for Member States' choices.**
- (3) The design of the three regulatory options is not sufficiently clear. It does not integrate well enough the various measures and does not link well to the objectives.**

This opinion concerns a draft impact assessment which may differ from the final version.

(C) What to improve

(1) The report should be clearer about the scope of this initiative, its relations with the other on-going revisions of related legislation, and whether, and where, all assumptions and definitions are streamlined across the health legislation.

(2) The report should explain more convincingly why there is a need for harmonised measures at EU level (beyond the current EU standards). It should include the cross-border dimension in the legal basis for the preferred options. The report should better explain why a different legal instrument ('regulation') has been chosen and it should demonstrate clearly that this choice still respects the subsidiarity principle.

(3) The report should better explain how the three regulatory options would function in practice. It should better connect them with the respective measures and the objectives. All measures (e.g. voluntary and unpaid donations, and digital tools) should be well reflected throughout the report (in the problem section and objectives). The discarded options should be better justified.

(4) The report should better present the methodology of the multi-criteria analysis (using the SOCRATES tool) and its results. It should be clearer about the underlying assumptions and drivers and how it integrated stakeholder views in the analysis. More generally, it should also reflect stakeholders' diverse opinions throughout the report.

(5) The report should be more transparent about the status of the planned data system and what choices are still left for this initiative.

The Board notes the estimated costs and benefits of the preferred option(s) in this initiative, as summarised in the attached quantification tables.

Some more technical comments have been sent directly to the author DG.

(D) Conclusion

The DG must revise the report in accordance with the Board's findings before launching the interservice consultation.

If there are any changes in the choice or design of the preferred option in the final version of the report, the DG may need to further adjust the attached quantification tables to reflect this.

| Submitted to RSB on | 11 November 2021 |
| Date of RSB meeting | 8 December 2021 |

ANNEX: Quantification tables extracted from the draft impact assessment report

The following tables contain information on the costs and benefits of the initiative on which the Board has given its opinion, as presented above.

If the draft report has been revised in line with the Board's recommendations, the content of these tables may be different from those in the final version of the impact assessment report, as published by the Commission.

| I. Overview of Benefits (total for all provisions) – Preferred Option | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description | Amount | Comments |
| Direct benefits | | |
| Graded oversight approach allows to oversee some establishments with lighter approach and less resources than today (related to measure M1B) | EUR 4 m | 750 establishments eligible, mainly saving on inspection costs for authorities and for themselves |
| Common IT-platform to share assessments of novel BTC technologies reduces duplications (related to measure M4B) | >EUR 2 m | Conservative estimate; Requests to authorize same new technologies are introduced and assessed in parallel across EU; Sensitive to unit cost of assessments and authorisations |
| Risk-based schedule allows to inspect same activities/establishments more efficiently (targeting high-risk activities) (related to measure M3A)) | Not quantified | Model has rather assumed this to be a cost-neutral measure as the same number of resources (inspectors) allow for more oversight on most complex activities |
| Greater harmonisation of technical standards, through legal references to common rules set by expert bodies and joint Member State inspections will allow recognition of authorisations in other Member States, reducing the need for ad-hoc import authorisations in different Member States (M1A and 2B) | EUR 0.5 m / year | Applicable for almost 1,000 imports of bone marrow/stem cells through central registry (WMDA registry, could be subject to one joint authorisation) |

| | | |
|-----------------------------------------------------------------------------------------------------|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Deleting obsolete tests and screening measures (related to measure M1A) | EUR 2 m (example – West Nile Virus NAT tests) | Very high potential, given that every saving is multiplied by number of donations Example: West Nile Virus can be tested for by individual NAT test or by pooled NAT test, which is EUR 7 cheaper per test. Applicable on good 300,000 blood donations per year in countries affected by WNV |
| Employment /skills | | The investment in the digitalisation and future-proofing of the sector will increase the sector specific expertise (e.g. inspectors) and digital skills in an innovative, knowledge-intensive sector |
| Digitalization allows for more efficient administrative processes in authorities and establishments | To be further quantified | Common IT tools will facilitate local administration including registration and reporting by professionals as well as authorizations and oversight by authorities. E.g., annual reporting costs are estimated to go down from current 5,000-15,000EUR to 200-2000EUR with an automated reporting tool. |
| Indirect benefits | | |
| EU patients | Not quantified | Access – streamlined and harmonized legal framework improves (cross-border) access to matching BTC and early access to safe new therapies |
| EU citizens donating BTC | Not quantified | Trust and willingness to donate – more donations by citizens that can trust their own health is well protected |
| Public health budget holders | Not quantified | Improved affordability - more and new therapies with high value, but typically offered at cost-price by public actors. Access to standardized data to help assess real value of therapies. |
| Medical device companies | Not quantified | Market increase - increase of BTC activities required equipment and continuous supply of devices and diagnostics. |
| Manufacturers of medicinal products | Not quantified | Market increase - streamlined and harmonised BTC framework facilitating access to starting materials for BTC-based medicinal products (plasma derivatives, advanced therapies) |

Table 3.1 Overview of Benefits (total for all provisions) – Preferred Option

(1) Estimates are relative to the baseline for the preferred option as a whole (i.e. the impact of individual actions/obligations of the preferred option are aggregated together);

II. Overview of costs – Preferred option

| Over 10 years, 1000 EUR | | EU | | Businesses including and BE/TEs healthcare | | National Administrations | |
|--------------------------------------------------|----------------|---------|-----------|-----------------------------------------------|-----------|--------------------------|-----------|
| | | One-off | Recurrent | One-off | Recurrent | One-off | Recurrent |
| Obj 1 – Patient protection | Direct costs | 1 474.6 | 1 343.3 | 25 109.1 | 9 441.3 | 1 760.7 | 1 402 |
| | Indirect costs | | | | | | |
| Obj 2 – donors & offspring protection | Direct costs | 1 224.6 | 1 057.6 | 28 475 | 12 241.3 | - | 722 |
| | Indirect costs | | | | | | |
| Obj 3 – Oversight | Direct costs | 4 918.3 | 3 051.7 | - | - | 5 000 | 49.6 |
| | Indirect costs | | | | | | |
| Obj 4 – Innovation | Direct costs | 2 846.1 | 1 944.3 | 992.3 | 4 137.8 | 2 810.7 | 667.5 |
| | Indirect costs | | | | | | |
| Obj 5 – supply monitoring | Direct costs | 1 699.2 | 1 258.1 | 28 402.7 | 2 563.7 | 213.2 | 327.1 |
| | Indirect costs | | | | | | |

Table 3.2 Overview of costs – Preferred option
